Presentación

Como parte del seguimiento epidemiológico del consumo de drogas en pacientes de primer ingreso a tratamiento en Centros de Integración Juvenil (CIJ), el presente documento presenta la actualización de las tendencias observadas en la **droga de mayor impacto** en los últimos 12 meses de los usuarios de drogas ilícitas que ingresaron entre el segundo semestre de 2004 y el primer semestre de 2019.

Los datos se obtuvieron del formato de “Entrevista Inicial” del Expediente Clínico abierto a cada usuario de drogas que ingresa por primera vez a tratamiento a CIJ. El registro de la información lo realiza el personal del Equipo Médico Técnico designado para ello en cada una de las unidades de atención. Cabe señalar que en el CIJ La Piedad, la información de la entrevista inicial se registra en formato físico y la captura electrónica de la información la efectúa personal del área de investigación responsable del proyecto.

La información que se presenta es a nivel nacional y para cada una de las entidades federativas en las que CIJ cuenta con al menos una unidad operativa y donde se brinda el servicio de tratamiento.

Las drogas que se incluyen en las tendencias del consumo son: tabaco, alcohol, cannabis (mariguana), inhalables, cocaína en polvo (cocaína), crack, metanfetaminas, MDMA (Éxtasis) y otras metanfetaminas alucinógenas, Benzodiazepinas (incluye Royhpnotol), heroína y alucinógenos.

Finalmente, cabe señalar que la tendencia registrada en el consumo de drogas a partir del primer semestre de 2010 puede ser reflejo del ajuste realizado en el formato de «Entrevista Inicial» utilizado para la obtención de la información y de la implementación del expediente a un sistema electrónico.

Unidades de atención

**Droga de mayor impacto reportada por
usuarios de drogas ilícitas solicitantes de tratamiento en CIJ
Nivel Nacional**

2º semestre de 2004 - 1er semestre de 2019
