# Presentación

Como parte del seguimiento epidemiológico del consumo de drogas en pacientes de primer ingreso a tratamiento en Centros de Integración Juvenil (CIJ), el presente documento presenta la actualización de las tendencias observadas en el **consumo alguna vez en la vida** de los usuarios de drogas ilícitas que ingresaron entre el segundo semestre de 2004 y el segundo semestre de 2021.

Los datos se obtuvieron del formato de “Entrevista Inicial” del Expediente Clínico abierto a cada usuario de drogas que ingresa por primera vez a tratamiento a CIJ. El registro de la información lo realiza el personal del Equipo Médico Técnico designado para ello en cada una de las unidades de atención. Cabe señalar que a partir del primer semestre de 2021 la información proviene del Sistema CIJ 3.0, donde se amplió el registro de sustancias.

La información que se presenta es a nivel nacional y para cada una de las entidades federativas en las que CIJ cuenta con al menos una unidad operativa y donde se brinda el servicio de tratamiento.

Las drogas que se incluyen en las tendencias del consumo son: tabaco, alcohol, cannabis (mariguana/hachís), inhalables, cocaína (clorhidrato de cocaína), crack, metanfetaminas, éxtasis (MDMA y sustancias con efectos similares), Benzodiacepinas (incluye Royhpnol), heroína y alucinógenos.

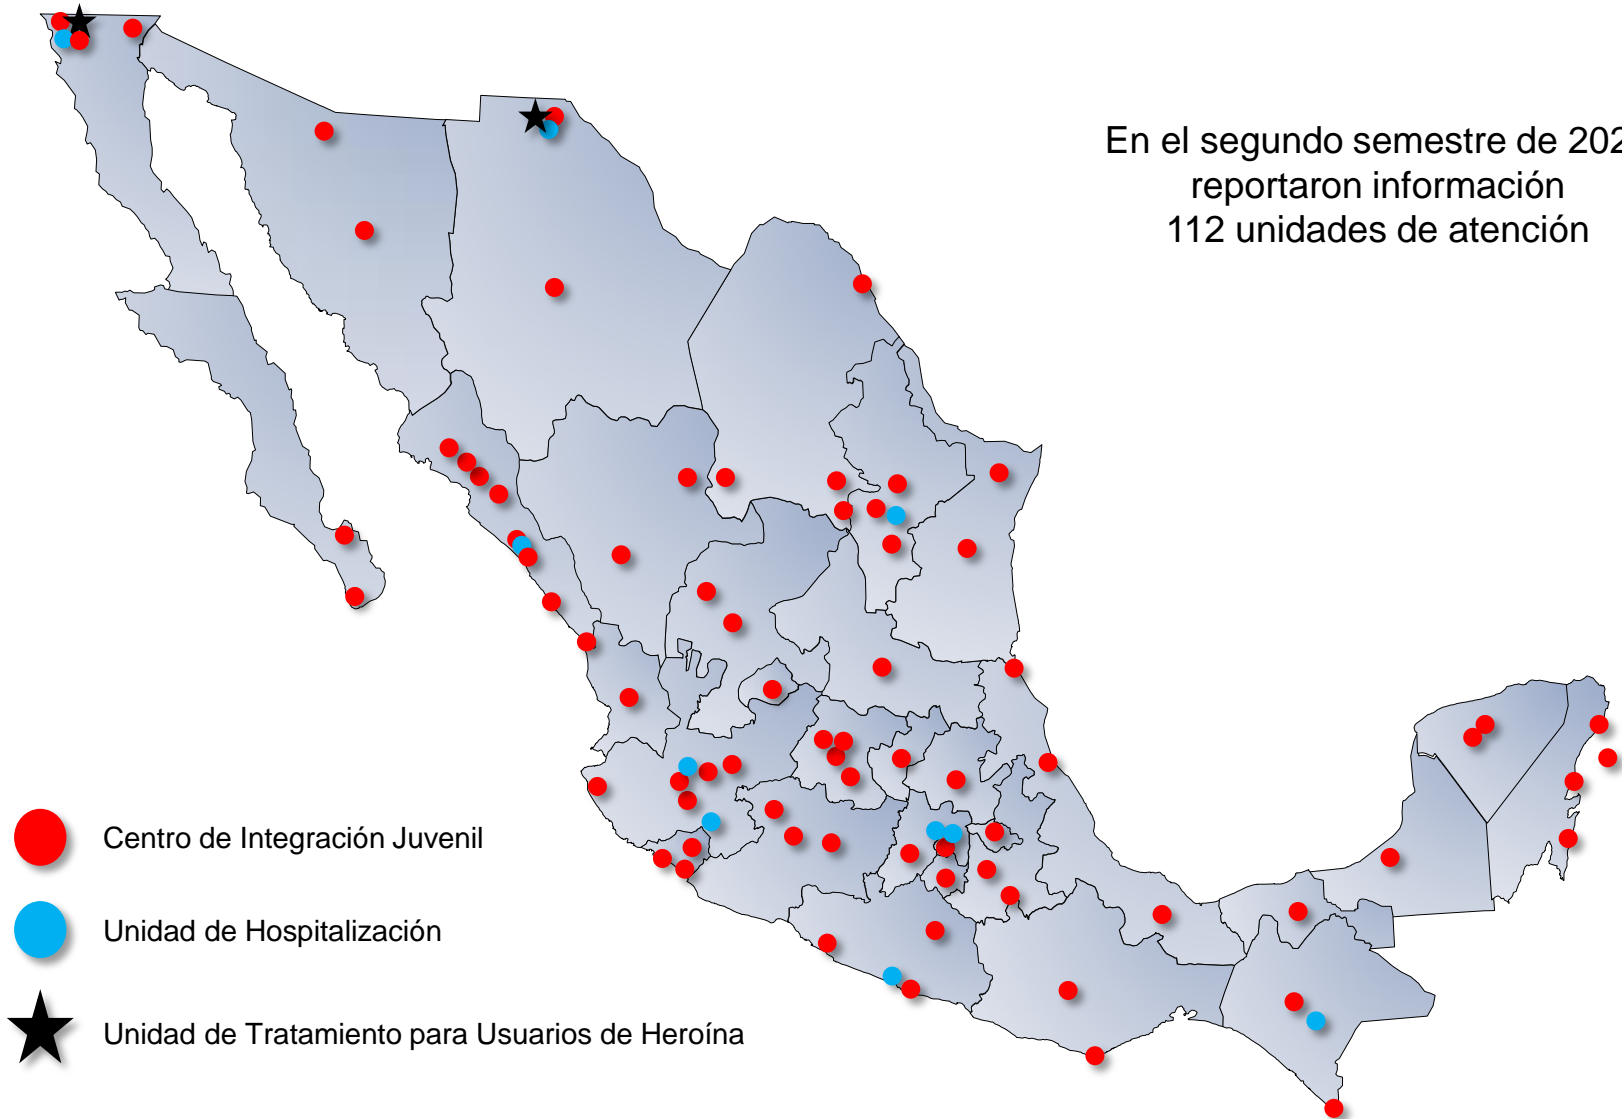

Cabe mencionar que a lo largo de los años las tendencias del consumo se han visto influenciadas por diversos motivos y que hay que tener en cuenta al momento de su interpretación. Para el primer semestre de 2010 se ajustó el formato de «Entrevista Inicial» y se incorporó el expediente clínico a un sistema electrónico. A partir del 2020, con las políticas sanitarias establecidas por el gobierno para contener la pandemia por Covid-19, a la fecha se ha registrado un menor número de nuevos ingresos a tratamiento. Y en el primer semestre del 2021 se ajustó nuevamente el formato de «Entrevista Inicial» y se implementó un nuevo sistema de captura (Sistema CIJ 3.0.).
