Presentación

El presente documento presenta la actualización de las tendencias observadas en el **consumo alguna vez en la vida** de los usuarios de drogas ilícitas que ingresaron por primera vez a tratamiento a Centros de Integración Juvenil entre el primer semestre de 2005 y el primer semestre de 2017.

Los datos se obtuvieron del formato de “Entrevista Inicial” del Expediente Clínico utilizado en la atención terapéutica de los usuarios de drogas que solicitan atención por consumo de drogas. La captura de información la realizó en un Segundo momento el Sistema Nacional de Vigilancia Epidemiológica de las Adicciones (SISVEA) de la Dirección General de Epidemiología de la Secretaría de Salud, en un segundo momento por la Dirección de Planeación de CIJ y actualmente parte de la captura la realiza directamente el terapeuta responsable de la entrevista a través del expediente clínico electrónico desarrollado por la institución y en el caso donde la unidad de atención no cuenta con el recurso del expediente clínico electrónico, la captura la realiza el personal de investigación responsable del proyecto.

La información que se presenta es a nivel nacional y para cada una de las entidades federativas en las que CIJ cuenta con al menos una unidad operativa y donde se brinda el servicio de tratamiento.

Las drogas que se incluyen en las tendencias del consumo son: tabaco, alcohol, cannabis, inhalables, cocaína en polvo, crack, metanfetaminas, MDMA (Éxtasis) y otras metanfetaminas alucinógenas, benzodiazepinas (incluye Rolyhpnol), heroína y alucinógenos.

Las tendencias registradas en el consumo de drogas en el segundo semestre de 2010 puede ser reflejo del ajuste realizado en el formato de «Entrevista Inicial» utilizado para la obtención de la información y de la implementación del expediente a un sistema electrónico.

Unidades de atención
