# Presentación

Como parte del seguimiento epidemiológico del consumo de drogas en pacientes de primer ingreso a tratamiento en Centros de Integración Juvenil (CIJ), el presente documento presenta la actualización de las tendencias observadas en la **droga de mayor impacto** en los últimos 12 meses de los usuarios de drogas ilícitas que ingresaron entre el segundo semestre de 2004 y el segundo semestre de 2020.

Los datos se obtuvieron del formato de “Entrevista Inicial” del Expediente Clínico abierto a cada usuario de drogas que ingresa por primera vez a tratamiento a CIJ. El registro de la información lo realiza el personal del Equipo Médico Técnico designado para ello en cada una de las unidades de atención. Cabe señalar que en el CIJ La Piedad, la información de la entrevista inicial se registra en formato físico y la captura electrónica de la información la efectúa personal del área de investigación responsable del proyecto.

La información que se presenta es a nivel nacional y para cada una de las entidades federativas en las que CIJ cuenta con al menos una unidad operativa y donde se brinda el servicio de tratamiento.

Las drogas que se incluyen en las tendencias del consumo son: tabaco, alcohol, cannabis (mariguana), inhalables, cocaína en polvo (cocaína), crack, metanfetaminas, MDMA (Éxtasis) y otras metanfetaminas alucinógenas, Benzodíacepinas (incluye Rorhpnol), heroína y alucinógenos.

Cabe señalar que las tendencias registradas en el consumo de drogas en el primer semestre de 2010 pueden ser reflejo del ajuste realizado en el formato de «Entrevista Inicial» utilizado para la obtención de la información y de la implementación del expediente a un sistema electrónico.

Mientras que, para el primer y segundo semestre de 2020 debe tomarse en cuenta la disminución de casos ocasionada por las medidas de confinamiento establecidas por el gobierno federal para atender la pandemia del Covid-19.
